PROFESSIONAL SUMMARY

Lead Software Engineer with 7.5+ years building production systems in telecom and navigation. Specialist in Java, Spring Boot, microservices, IAM and API gateways, and Kubernetes-based platform engineering. Lead 7 engineers on the API Gateway serving 1,200+ service deployments at HERE Maps. Spring Framework contributor and named inventor on an international patent application.

CORE EXPERTISE

Platform Engineering | Microservices & System Design | Distributed Systems | IAM & API Gateway
CI/CD Pipelines | Rate Limiting | Event Sourcing | Billing & Access Management
Multi-Tenant Architecture | TDD & BDD | POC Leadership & MVP Delivery | Agile / Scrum
Cloud-Native (Kubernetes, Docker, Helm) | Observability (Kibana, Grafana)
12-Factor Apps (Spring Boot, Spring Cloud) | Proxy & Traffic Management (NGINX, Traefik)

TECHNICAL SKILLS

Languages & Frameworks: Java, Spring Boot, Microservices, Go, ReactJS, JavaScript, Spring Framework, Spring Cloud, Hibernate, JPA, SQL

Platform & DevOps: Kubernetes, Helm, Docker, Traefik, NGINX, Jenkins, Linux

Cloud & Serverless: AWS, GCP, EC2, S3, ALB, CloudWatch, Athena, AWS Lambda

IAM & API Gateway: Keycloak, WSO2, OAuth 2.0, JWT, SSO

Messaging & Databases: Apache Kafka, PostgreSQL, MySQL, Redis

Observability & Workflow: Grafana, Kibana, Camunda BPMN, Apache NiFi

Testing & Quality: JUnit, Mockito, SonarQube, Swagger

Tools: Maven, Git, JIRA, Confluence

PROFESSIONAL EXPERIENCE

Lead Software Engineer, Platform Engineering & IAM Gateway

Jul 2024 – Present

HERE Technologies, Bangalore

Tech: Java, Spring Boot 3.x, Go, Kubernetes, Helm, Traefik, NGINX, Keycloak, OAuth 2.0, Kafka, PostgreSQL, AWS Lambda, Grafana

- Lead 7 engineers building the IAM API Gateway (authentication, logging, rate limiting, zero-trust security) serving 1,200+ service deployments across HERE Maps.
- Cut the gateway codebase by about 80% and migrated 78% of services to a multi-tenant design (one gateway, many services), lowering infrastructure cost.
- Built the Billing and Access Management (BAM) module on PostgreSQL: subscription-based throttling, per-client token tracking, and a real-time usage dashboard.
- Migrated Kubernetes ingress from NGINX to Traefik, simplifying configuration for routing, load balancing, and SSL termination.
- Built a self-service Developer Automation Portal (Spring Boot, Angular, Helm) so teams provision resources on demand, removing ops bottlenecks globally.
- Built the OLP CLI and post-deployment smoke tests in Go; the CLI is now the standard IAM tool across HERE's global teams.
- Built AWS Lambda processors for token validation callbacks and usage-metric aggregation, reducing always-on compute cost.
- Upgraded Spring Boot 3.1.4 to 3.5.1; found a header validation bug and fixed it in the Spring Framework (merged, shipped in the next patch).
- Own incident management (triage, root cause analysis, resolution) for the IAM platform; wrote runbooks and escalation procedures to cut recovery time.
- Prototyped Claude API tooling for code review summaries, incident RCA drafts, and API documentation, with output guardrails.

Senior Software Engineer & Team Lead, OSS Platform

Aug 2021 – Jun 2024

Rakuten Symphony

Tech: Java, Spring Boot, Kafka, MySQL, Redis, Keycloak, WSO2, Camunda BPM, Kubernetes, Helm, Docker, Jenkins, SonarQube

- Designed the OSS Platform on 12-factor microservices, the base for 10+ product teams in telecom network management.
- Owned Kubernetes CI/CD end to end (test, build, deploy, integration test, publish), shortening releases and letting teams ship independently.
- Automated telecom workflows with Camunda BPM, replacing manual steps with BPMN orchestration.
- Led 6 engineers; turned requirements into UML designs with product owners while keeping TDD/BDD standards.

Software Engineer, Digital Workflow Studio

Jun 2019 – Aug 2021

Rakuten Symphony

Tech: Spring Boot, AngularJS, MySQL, Jenkins, SonarQube, JUnit, Mockito, Git

- Broke a legacy monolith into Spring Boot microservices for better scalability.
- Cut deployment time from 30 to 2 minutes by redesigning Jenkins pipelines.
- Coached 5 engineers; introduced code reviews that raised SonarQube quality scores.
- Built self-service troubleshooting flows that reduced customer support tickets.

ACHIEVEMENTS

- Open-source contributor to the Spring Framework: header validation fix merged and released in a patch version.
- Patent: [PCT/US2022/025500](#) (published as [WO2023204801A1](#))
- Oracle Certified Professional, Java SE 8 Programmer (Dec 2018).
- OLP CLI adopted as the standard IAM utility across HERE's international teams.
